Ivie, Richard

Kamm, Jonathan (killed)

Lemon, John F

Lopez, Arthur J

Mills, Steven Brett

North, Tony

Patch, Douglas

Bosnian War

(25 June 1991 to late Feb 1994)

Veterans From Wasatch County:

(Note: We have no one listed on our rosters, who participated in this
War. Please help us complete these lists: Call 654-1645 after 7 pm)

projects? That's because pressure treatment prevents destruction of the wood by its natural enemies: fungal decay and termites. Properly treated lumber will last for decades in outdoor applications.

What treatment goes into the wood? The lumber for most garden and deck projects is protected by a preservative solution formulated in accordance with strict industry standards. The preservatives used in treating wood are naturally occurring compounds combined into a highly effective water-based preservative concentrate. Part of the preservative used is recycled from mining wastes, providing a beneficial product from a waste material.

The preservative concentrate is diluted at wood preserving plants to contain 95- to 99-percent water, and then used to treat and preserve the wood. In the pressure-treating process, bundles of wood are placed in a large cylinder. A vacuum process removes air from the wood. Then the sealed cylinder is filled with preservative and pressure applied to force the solution deep into the wood's structure. Modern treating plants are closed systems

preservatives react to form a bond with the wood. The permanency of this bonding process has been demonstrated in more than 50 years of tests by various scientists and government agencies.

Independent quality control inspection agencies assure quality of preserved wood; look for the symbol on the ink stamp or end tag on each piece of preserved wood. All of these steps provide assurance to consumers that they are getting

YOUR MONEY

Q: If I had my way, there wouldn't be any banks. I think they take advantage of people. Who needs them? My mother always kept her money in a coffee can and we got along fine. I'm doing the same.

Billings, Mont.

A: Without banks, the world economy would simply shut down. Banks didn't invent themselves. They exist because society must have the financial services they provide. As the world moves steadily into the age of computers and electronic money transactions, banks, credit unions, savings and loans, and related financial institutions will become even more important in keeping the engines of commerce running smoothly. On a personal
